SUMMARY

I am a detail-oriented Data Annotator with a growing skill set in **data labeling**, **data annotation**, and **Python scripting**. Hands-on experience using **CVAT.ai** and **Label Studio**, and proficient in **bounding boxes**, **instance and semantic segmentation**, and **NER (Named Entity Recognition)**. Recently completed an independent end-to-end **image annotation project** that included 300+ annotated objects, an end-to-end text annotation **NER project** that included 840+ labels. Currently pursuing a **Python certificate**.

Skills

- **Technical Skills:** Python, CVAT.ai, Label Studio, XML and JSON parsing, Markdown
- **Annotation Techniques:** Bounding boxes, instance segmentation, semantic segmentation, classification, NER (Named Entity Recognition)

EXPERIENCE & TECHNICAL PROJECTS

Urban Scene Image Annotation | 11/2025 | ([GitHub Link](#))

Tools: CVAT.ai, XML, Python

Techniques: Bounding Boxes, Instance Segmentation, Semantic Segmentation, Classification

- **Annotated 300+ objects across 20 urban scenes**, including complex occlusions and edge cases, to create a complete dataset.
- **Wrote and adhered to strict annotation guidelines**, consistently handling occlusion, lighting conditions, shadows, and small objects to ensure high-quality labeling, which resulted in fast and consistent annotations and fewer edge cases.
- **Provided an automated method for summarizing annotation stats** by parsing the XML file using a Python script.
- **Identified and documented class imbalances** (e.g., car vs. pedestrian ratios), proposing *weighted training* and *oversampling strategies* to mitigate model bias.

E-Commerce NER | 03/2026 | ([GitHub Link](#))

Tools: Label Studio, XML, JSON, Python

Techniques: NER (Named Entity Recognition), stratified sampling

- **Labeled 840+ spans across 150 data points of e-commerce data** using Label Studio, resulting in a robust dataset.
- **Created and adhered to strict and detailed guidelines**, handling labeling conflicts and ambiguities, resulting in a consistent workflow and high-quality dataset.
- **Wrote Python scripts** to create a clean subset of data for labeling using a stratified sample strategy, and display labeled dataset statistics.

EDUCATION & CERTIFICATIONS

High School Equivalency Diploma (GED) — Riverside High School, Yonkers, NY 10701 – 04/2019

Python Certification — freeCodeCamp (*in progress, ~70% completed*)
